Activity 2 Worksheet - Materiality and Scorecard

Exact procedure

1. Open mock-data/mock-data.csv; verify the stakeholder evidence, date and reliability before using a score.
2. Plot each issue at (enterprise impact, stakeholder significance) on a 5×5 matrix.
3. Classify priority: both scores ≥4 = strategic priority; either score ≥4 = monitor/engage; both <4 = watchlist.
4. Calculate a confidence-adjusted priority: significance × impact × reliability / 5. Worked example for climate transition: 5 × 5 × 4 / 5 = 20.
5. For each strategic priority, define one KPI with numerator, denominator, unit, reporting boundary, baseline year, 2030 target, owner and source system.
6. Set the traffic-light rule: green ≥target; amber within 5 percentage points below target; red >5 points below target.

Issue	Matrix class	Confidence-adjusted priority	KPI	Baseline	Target	Owner	Status rule
